

## ***Annex 1. Substance specification***

### **Name**

**Ash:** The product from the burning of carbonaceous materials. The following elements may be present as oxides: aluminium, calcium, iron, magnesium, phosphorous, potassium, sodium and silicon.

### **Definition**

Ash is an UVCB substance originating from gasification and combustion of biomass, biofuels, peat and sludge with coal, solid recovered fuel (SRF) and supplementary fuels as needed.

### **Other remarks**

In case future studies show that certain specifications of the Substance are toxicologically different from the specification in this Annex, those different specifications will be categorized out of the scope of the cooperation under this Agreement.
