

## Visit of the Enlarged KWS Training Center

After a planning period of almost three years and a construction period of 13 months the extension of the KRAFTWERKSSCHULE E.V., training center of the German and international power industry, has been completed.

You now will have the opportunity to visit a state-of-the-art training institution. All technical media being part of a modern basic and advanced training, connected to an infrastructure aiming at an all-embracing communication, characterize the KRAFTWERKSSCHULE E.V. as different type of school.

The already existing building is now integral part of the extended training center and has been adapted to the technical standards of the new section. So an area of teaching and learning has been created, which meets all national and international requirements concerning modern basic and advanced training.

Central part of the extension is a six-storied office section, which provides all technical conditions to allow for a progressive kind of office work. The office design is both efficient and ergonomically correct and offers a pleasing working atmosphere.

The optimal possibilities for the staff to exchange information and experiences as well as the close proximity to the class rooms are distinguishing features of the training center.

Please use the opportunity to visit the KRAFTWERKSSCHULE E.V. and get yourself an idea of the surroundings in which your future power plant attendants, power plant operators and power plant shift supervisors will be trained from now on.

Program: Presentation of the KWS training center

Visit of all facilities and possibility of operating the new simulators:

- 1,100 MW hard coal class, control technology ABB
- 600 MW lignite class, control technology Siemens

### Date

September 24, 2010

13:30

Participation in the technical visit is free.

### Meeting point

VGB Conference office

There will be a bus shuttle service between Messe Essen, the KWS Training Center and Essen Central Station.
