Die digitale Revolution: Neue Pfade zu höherer Produktivität in der Erzeugung
The digital revolution: New paths to productivity in power generation
Sabine Stock, Daniel Schlecht, Frank Klose, The Boston Consulting Group

Abstract

Faced with intense competitive pressure, conventional power producers must take decisive action to achieve long-term productivity gains. An important part of these efforts is the deployment of new digital methodologies and tools. Those technologies—including big data, advanced robotics, and additive manufacturing—are revolutionizing industries across the globe and along all the steps of the value chain. The time has come for power producers to join the revolution. This talk showcases examples of power producers who embrace the challenge, and have achieved first step changes in making their fleets more efficient, reliable and safe.
