Praxiserfahrungen aus Energiespeicherprojekten: Bankfähigkeit, Ausschreibung und Realisierung
Bankability, tendering and realisation of energy storage projects – learnings from practice
Dr. Martijn Huibers, Haike van de Vegte, Dr. Koen Broess, DNV GL, Arnheim (Niederlande)

Abstract

When comparing the rapidly increasing number of planned, under construction and installed energy storage systems, vast differences between projects can be observed. For example risk mitigation, technical solutions, tendering documentation, verification/certification and warranty approaches are far from standardised. From experience as independent/owner’s engineer in many projects worldwide, DNV GL will share some insights, trends and best practices.
