Main Audience at the VGB Expert Event

Environmental protection and preservation of nature is one of the many important challenges not only for hydropower, but for society as a whole. As one of the most environmentally and climate-friendly forms of energy generation, hydropower plays an important part in the current energy system and that of the future. For this, balancing hydropower and ecology in the best possible way is a key aspect to ensure the further expansion of hydropower, while also maintaining existing plants to meet responsibilities and ameliorate the public perception. The international event will bring together experts from leading operators, manufacturers and suppliers, authorities as well as scientists as well as related stakeholders to discuss important issues in the field of ecology and environment in hydropower with session on:

- Ecological hydraulic engineering and renaturation
- Optimal ecological operation in case of hydropeaking
- Fish monitoring systems and experience with fish ascent and descent
- Sediment management
- Results of international research projects
- Legal aspects at EU level
