## KELI 2008

May 6 to 8, 2008 in Hamburg

**Announcement**

# Conference Electrical Engineering, Instrumentation and Control, Information 2008 with Technical Exhibition

**May 6 to 8, 2008, Hamburg, Congress Centrum Hamburg**

The power generating industry is facing new challenges. Efforts have started to replace obsolete plants that were commissioned in the sixties and seventies of the past century. It is expected that power plants today can be operated continuously, highly efficient, environmentally friendly and safely. Reliable control and monitoring by means of **electrical, instrumentation & control and information systems** are keys to successful operation of these large-scale plants.

The KELI 2008 Conference will be held in Hamburg, from May 6 to 8, 2008. Lectures and presentations by power plant operators covering topical issues will be complemented with exhibition stands and comprehensive presentations of manufacturers and system providers. The innovative conference concept offers a trade-show-like atmosphere to complement the users' presentations. This concept met with positive response from almost 300 participants from Germany and abroad when it was first implemented at the KELI 2006 conference in Neuss.

### **Key topics of this conference will include:**

- Innovations in new plant construction projects
- High-availability operation with old plants and new requirements
- Current experiences from project handling and implementation
- Quality assurance (based on VGB standards, IT security, enhancement of product quality and staff qualification) on the part of manufacturers and operators
- Fulfilment of new regulatory requirements (Plant Safety Ordinance, safety-related instrumentation and control system)
- New generation of I&C personnel at manufacturers and operators
- Know-how and loss of capacity
- Students' forum on future opportunities and prospects in the energy industry

The selection of lectures and presentations has not yet been completed but already now we can promise you exciting contributions, interesting talks and an appealing supporting programme.

We are pleased to count again on the support of **VDE-ETG and VDI**. Attracting the interest of **future engineers** to work in the industry will also be an issue; in this context, generous support will be provided for travel, accommodation, catering and conference documents for students.

Please make a note of this event in your diary for the next year! The invitation will be published in early 2008.

Information concerning participation

**VGB PowerTech e.V.** · International technical association for power and heat generation

Klinkenstr. 27-31 - 45136 Essen - Germany - Phone +49 201 8128-206 - E-mail: [ulrike.kuenstler@vgb.org](mailto:ulrike.kuenstler@vgb.org)
